

## How to Create a ReactJs Project

- Install latest NodeJs link 🖱️ (<https://nodejs.org/en>)
- Create a new folder and run in vs code and go to terminal ( ctrl + shift + ` ) and run the following commands
- “ npm create vite@latest ” after this you have to enter the project name like “ news-website ” and hit enter after that you have to select language like “ React ” and hit enter
- Then select scripting language like “ JavaScript ” and hit enter after this your project will be created
- Now in order to run your project you have to install all the packages that your project needs for that just simply run the command “ npm install ” and hit enter this will install all the required packages, after that you can run your project now by following command
- “ npm run dev ” this command will give you a port like (<http://localhost:5173/>) just copy and paste it your browser your project will be run
- Note : Your project directory name must be formal mean not contain special character like (#,\*) etc

Enjoy!
